From Lamac, Bataan, Philippine Islands. Presented by Mr. P. J. Wester, horticulturist, Division of Horticulture, Lamac Experiment Station. Received June 14, 1913.

"A large, thorny tree, 6 to 12 meters in height; the leaves are 16 to 24 centimeters long, and broadly winged; in fact, the wing area sometimes exceeds the leaf area. The species is quite variable. The form sent you has smooth, oblate to pyriform-turbinate shaped fruits. Surface greenish lemon, rind medium thick, flesh greenish, juicy, sharply acid, aromatic, contained in 12 to 14 loculi. The fruit makes a fair 'ade' and is eaten with rice by the natives; it is also used in cleaning clothes. As a fruit the cabuyao has little value, but it may, on account of its remarkable vigor, be a valuable stock for other citrus fruits; in fact, I have several imported varieties growing on it now." (*Wester*.)
